

Secrets of successful medical device connectivity

Bill Saltzstein
Code Blue Communications
Playbook Vancouver 2017

Agenda

- * The secrets:
 - * All medical devices *shall* be connected
 - * You *shall* understand the requirements requirements
- * Wandering and wondering the wide world of wireless
- * Two keys/pleas from me
- * Q&A

All medical devices *shall* be connected

- * Why?
- * Where?
- * How?

All medical devices *shall* be connected – Why?

- * Replace wired connections
 - * Mobility/safety
 - * Data collection
- * Telemedicine
 - * Remote consultation & review (*photo*)
 - * Home Health
 - * Aging in Place
- * Health and Fitness
- * Cloud connectivity
 - * Electronic Health Record (EHR)
 - * Big Data analytics

All medical devices *shall* be connected – Where?

- * Classic answers:
 - * Hospital
 - * EMS
 - * Home
- * Real answers:
 - * Starbucks
 - * 37,000 feet
 - * Stuck on I-5
 - * In the bathroom
 - * In the elevator
- * Real environments require creative solutions for connectivity

How: Understand the requirements requirements for connectivity

- * Too many times we come up with the answer before the question (42)
 - * Connectivity doesn't *make* the product
 - * Connectivity *enables* the product
 - * Behavior modification: Technology can not directly address Psychology
- * Understanding the use model is essential for connectivity decisions
 - * Users – note the 's'
 - * Environment – home, Starbucks, hospital, EMS, airplane, ...
 - * International
- * Requirements to consider for mobility
 - * Power management and charging – batteries, batteries, batteries!
 - * Body proximity – antennas, antennas, antennas!
 - * BYOD (Bring Your Own Device)

Wandering and wondering in the wide world of wireless

- * Two real choices for short range
 - 1) WiFi
 - 2) Bluetooth
- * Multiple flavors of Cellular for long range (nG, low rate)
- * Everything else
 - * MICS (Medical Implant Communication System)
 - * MBAN (Medical Body Area Network)
 - * ZigBee, Thread (802.15.4)
- * Heresy: remember that a wire can still be a good thing
 - * Remember to consider/compare the wired experience

How to choose?

- * Go back to your requirements and environment!
 - * If you need long-range, independent connectivity → cellular
 - * If you're in hospital and need EHR connectivity → WiFi
 - * For anything else → Bluetooth
 - * Full disclosure: I'm a Bluetooth geek...
- * Right, now which flavor of Bluetooth?
 - * Bluetooth classic if
 - * Audio
 - * High-rate streaming
 - * Long range
 - * For now... Bluetooth 5 provides for those needs if you can wait

The dual-edge of standards

- * The issues:
 - * Is there real compatibility?
 - * Marketplace – is compatibility an asset or a liability?
 - * Regulatory and testing
- * Wireless standards bodies
 - * Bluetooth SIG – legal requirement
 - * WiFi Alliance – marketplace requirement?
- * Industry compatibility specifications
 - * AAMI – primarily for in-hospital devices
 - * Continua Alliance
 - * Bluetooth SIG
 - * Bluetooth Transcoding Whitepaper
 - * Health/medical profiles – use them if you wish
 - * With Bluetooth low energy you can make your own
- * Medical regulatory requirements
 - * FDA
 - * European regulations (and what about the UK?)
 - * Other country specific requirements

My pleas – Please!

- * Design for regulatory
 - * Understanding testing requirements
 - * Real-world environment based
 - * Interoperability/compatibility
 - * Design-in testability features
- * Design for security
 - * Security as part of hazard analysis & mitigation
 - * Don't do this →

4/5/17

Summary

- * The true secrets are in Understanding and Planning
- * Understand where and how connectivity benefits/ enables your system
- * Understand the use models
- * Pick the technology and system components based on the requirements, not the cool-factor
- * Design-in for regulatory and security up front

Notes on requirements

- * Extract requirements, not solutions
 - * Yes: “battery powered”, “disposable”, “body-worn using adhesive”, “interface to smartphones”
 - * No: “Bluetooth low energy”
- * Identify Interoperability and Compatibility
 - * Medical device interoperability – how does it operate/interface to other systems or devices
 - * Infrastructure – “shall connect using in-hospital wireless infrastructure”
 - * Information systems – “shall support data flow to EHS including Cerner and McKesson”
- * Identify Obsolescence and technology life cycle
 - * Consider mismatch between Medical Device lifecycle and Wireless technology lifecycle
 - * “shall be maintained for 5 years of sales, 10 years of support”
- * Consider CyberSecurity
 - * “shall comply with HIPAA”
 - * “shall support US VA sales” (eg: FIPS 140-2 specification requirement)
- * Identify Country-specific regulatory requirements
 - * “shall support sales to the following countries”
 - * Good to include these in groups – initial countries, 2nd wave, 3rd wave, ...
